

Filter

Pipe.ts

```
transform(objs:any, term:any): any {  
  if (term === undefined) {  
    return objs;  
  }  
  return objs.filter((obj)=> {  
    return (obj.teamOne.toLowerCase().includes(term.toLowerCase())  
    || obj.teamTwo.toLowerCase().includes(term.toLowerCase()));  
  })  
}
```

Table.html

```
<form>  
  <div class="text-center">  
    <label for="">Filter By team One</label>  
    <input type="text" [(ngModel)]='term' [ngModelOptions]="{standalone:  
true}">  
  </div>  
</form>
```
